X-eHealth

Exchanging Electronic Health Records
in a common framework

Objectives

These sessions, organised by the X-eHealth project as a stakeholders' communication initiative, are ongoing practical training to discuss eHealth interoperability across Europe with Health Professionals from different countries, being this second session dedicated to the Medical Images and Hospital discharge Reports domains.

It aims to furthering communication activities through target capacity-building training sessions earmarked to introduce digital skills to health professionals regarding the usage of cross-border services while raising knowledge of the different MS legislative environment.

Even though this session is targeted to health professionals, is of extreme relevancy the participation of other stakeholders' groups to provide an environment to share ideas, expectations and cooperation between different health professionals.

- Introduce cross-border digital health services to health professionals
- Raise knowledge regarding member states' different legislative environments and digital health cross-border services adoption.
- Capacitate health professionals to act as direct means of communication to instruct citizens on how to use digital health services and know their rights.
