Patient Summary

What is it?

A summarized and essential version of the patient's clinical history, which helps the health professional to better understand your clinical condition, namely in emergency situations.

In practice, if a foreign EU citizen needs urgent healthcare in Portugal, the doctor may request the visualization of his/her Patient Summary, in order to guarantee the continuity of their treatments and safety.

ePrescription and eDispensing

What are they?

Services enabling European citizens to obtain medicines from a pharmacy in another acceding Member State.

This process is carried out by a health professional in the country of affiliation and the electronic transmission of the prescription data is made to a participating foreign pharmacy, where the medication can be dispensed.

Medicines can only be dispensed by the person whose name appears on the prescription, upon presentation of their identification card.
